

## Feasibility and Site Finding

Arcus provides feasibility and site finding services for a range of development types including:

- Onshore renewables
- Offshore renewables
- Residential property

We use a variety of parameters to guide developers to the best sites or to help assess existing sites, using the following services:

- Resource Availability
- Planning Policy Analysis
- Environmental Constraints and Sensitivity Mapping
- Preliminary Environmental Assessment
- Consideration of Residential and Community Issues
- Transport and Access Feasibility Studies
- Site Design
- Geotechnical and Engineering Considerations
- Custom Site Finding Applications
- Portfolio Evaluations

Combining Geographical Information System (GIS) models and our experience of development requirements, we have developed a number of innovative site-finding applications based on specific client requirements and risk strategies. Once suitable sites for development are identified, we use our project expertise to provide advice and guidance to further refine sites to focus on, and provide a strategy for progressing sites.
